

POPA BOGDAN-GABRIEL

Aspiring Software Developer

CONTACT

• **E-mail:** bogdan.popa.g25@gmail.com • **Phone:** +40752179438 • **Github:** github.com/PxGluz • **LinkedIn:** www.linkedin.com/in/pxgluz • **Itch.io:** pxgluz.itch.io

I am a **fourth-year student** at the Faculty of Mathematics and Informatics in the **Computers and Information Technology** department. My main interests are **Game Development and Artificial Intelligence**, both of which allow me to project my creativity in their respective field. I am also very eager to learn new aspects of other Computer Science areas and also broaden my knowledge of my existing fields.

Currently, for my **Bachelor's thesis**, I'm implementing chunk based procedural generation using the **Unity Game Engine** and combining that with my **AI** knowledge to create smart enemies, that adapt to the player's behavior. Following this, I am planning to follow a **Masters Degree in Graphics, Multimedia and Virtual Reality at Faculty of Automatic Control and Computer Science**.

Education

- **Bachelor's Degree at the Faculty of Mathematics and Informatics (2020 - 2024)**

Being in the **Computers and Information Technology** department, I have acquired multiple skills regarding different Computer Science related subject such as: **Object Oriented Programming, Data Structures and Artificial Intelligence**.

- **Extracurricular Courses**

During my time at **Crazy Badgers** I have followed **Udemy courses** that allowed me to gain skills with using **Django** and **Wagtail** for back-end and introduced me to **React** for front-end.

Additionally, I have followed a Unity Game Engine course at **Game Dev Academy**, which introduced me to the basics of how to navigate and use the engine, creating a solid base for me to build up on to this day.

Extracurriculars

- **Hackathons and Game Jams**

I have participated in two **Natural Language Processing** hackathons organized by **Nitro Language Processing** in which I developed Machine Learning based models created from scratch or implemented the **BERT** model.

Additionally, by participating in a hackathon organized by **Zenko AI**, I was given the opportunity to work with the **OpenAI API** and learn how to use it in order to implement a **virtual assistant for a festival**.

Regarding **Game Jams**, I have participated in **5+** competitions in which I was able to develop games based on the theme and learn new techniques and features for the **Unity Engine**.

- **Overtime (Learn.Build.Play Competition – Organized by RGDA)**

With the competition spanning for **4 months**, me and 3 of my friends formed a team to develop Overtime in the **Unity Engine** using **C#**. Our **teamwork** and **project planning** allowed us to compete with the other **70 teams** and earn ourselves the **3rd place prize**.

- **Web Scraper for downloading PDFs**

In order to solve a **personal problem**, I have developed a Web Scraper using **Python** to iterate through the pages of a site and create **requests** to scrape all of the images needed. With said images, the program would merge them into **batches** and create **PDFs** to store them locally.

Work Experience

- **Crazy Badgers (July – December 2022)**

Working as a **full-stack developer** has allowed me to create fully functional sites from scratch using **Python** with frameworks such as **Django** and **Wagtail** for back-end, and **React** for front-end. Furthermore, this experience has allowed me to deepen my understanding of **working with a team, managing tasks and communicating with clients**.
